

## ABSTRACT

To be used with a chat client. A condition DB 3 associates prescribed conditions relating to a message to any channel with processing for such message, and stores  
5 this information. An acquisition unit 7, in accordance with a condition and processing, acquires information relating to a channel from a chat client. A determination unit 4, prior to the sending of a message into a channel, determines whether a message meets a condition based on the acquired  
10 channel information. An execution unit 5 carries out processing on a message based on determination results and condition, and sends the processed message into a channel via a chat client. An example of a condition is, that message is at least 30 lines or more. An example of  
15 processing is, confirming message with a user.
